

Homework 9

General Questions (Team)

1. How in practice would an in-browser client differ from one used solely for testing?
2. In example1-helloworld why are the program's argument prefaced with an underscore?
3. How does the owner of example2-counter program differ from the greeting account?

Tasks

1. Modify the existing `msg!` in example1-helloworld to log the program ID.
2. Retrieve the total program size of example1-helloworld.
3. Retrieve the lamport balance of example2-counter.
4. Modify the client for example2-counter to feed an incorrect address for the greeting account to the program.

hint use

```
solana account <ADDRESS>
```

to find out more about a given address content
