

# Homework 5

We will do exercises in this [repo](#)

The rust exercises are in a folder `homework_rust`

1. Install the exercises and fix the path

```
cargo install --force --path .
```

2. Run interactive homework window

```
rustlings homework 5
```

The current exercise is stated in the hint command, below for example it is exercise ``option2`.

```
2 | // Make me compile! Execute `rustlings hint option2` for hints
3 |
4 | // I AM NOT DONE
5 |
```

The shell will display which exercises has either failed at compilation or at testing.

Modify the file and if it passes all the tests remove this line:

```
// I AM NOT DONE
```

That will take you to the next file to fix.

The exercises are based on the rustlings exercises, but I have adapted them to follow the lessons.

You can use this [gitpod environment](#)
