Homework 12

1. Work through the CPI example : example4-cpi. You can run it with

   `npm run build`

   `npm run deploy:4`

   `npm run call:4`

   This program receives no instruction data, no accounts and it only logs a message using the `msg!` macro that can be viewed in the window running `solana logs

2. Work through the compute budget example : example5-compute. You can run it with

   (`npm run build`)

   `npm run deploy:5`

   `npm run call:5`

3. Work through the PDA example : example6-pda

   You can run it with

   (`npm run build`)

   `npm run deploy:6`

   `npm run call:6`

4. Modify example3-multifunc client and rust code so the user can invoke a new function `pub fn function_c()`.

5. In preparation for next week read this introduction to the Anchor framework
